About me

Quality means doing things right when no one is looking. - Henry Ford

Like Henry Ford, I believe that no matter what methods and tools you use and how hard you work, the most important thing is a smile on the face of the user who is satisfied with the quality of the product.

Hi, my name is Vladislav. I am a quality control engineer. Work experience +7 years. I am engaged in setting and supporting the process of quality assurance of projects, I also have experience in testing mobile applications and quality control according to the standards of android-developer or iOS-developer documentation.

I have tested web, mobile and desktop applications. I have experience in load testing, testing the internal part of the system (API, databases, application code) I also wrote documentation of different levels (Master Test Plan, Test Plan, Test Casey, checklists, reports on functional, load, acceptance testing, bug reports, test strategy).

I know how to create autotests for APIs based on POSTMAN. Write autotests on JAVA REST Assured, work with moc server and many other things. I will be glad to share my experience and make your product even better.

Shepelenko Vladislav

Date of birth:
09.11.1996
